

Tomás Agustín Salto

PHP Backend Developer · Laravel

Neuquén, Argentina tomasagustinsalto@gmail.com +54 9 11 2844 3673 github.com/tomassalto linkedin.com/in/tomassalto
tomassaltodev.netlify.app

Backend developer with a university technical degree in web development, working with PHP and Laravel over relational databases and Dockerised environments, plus Python/FastAPI on personal projects. I build applications end to end, from data modelling and REST APIs to the interface, and I keep a steady flow of my own projects in production. Open to remote and relocation.

SELECTED PROJECTS

Pallet Control — Laravel, PHP, MySQL, REST APIs, Docker 2026

Full stack application for warehouse operations control: Laravel backend, MySQL persistence, per-movement traceability and a Dockerised environment for reproducible deployment.
[Code](#)

MangaVault — React, Vite, FastAPI, SQLAlchemy, SQLite, Ollama 2026

Local manga and comics library with a custom web reader, a FastAPI backend and data modelling on SQLAlchemy. Integrates a local model via Ollama to enrich metadata, with a public demo kept separate from private use.
[Code](#)

MiColeNQN — React, TypeScript, REST APIs 2026

Web application focused on user experience, built on a typed component architecture with structured data consumption over REST APIs.
[Code](#)

CommitGPT — JavaScript, Node.js, CLI, Git 2026

CLI tool that generates commit messages from the Git diff, standardising history and speeding up the daily workflow.
[Code](#)

EXPERIENCE

Front-End Developer — Neowyzé May 2024 – Oct 2024

- Built sites and landing pages with Astro, React and Tailwind CSS for a range of clients, prioritising performance and responsive design.
- Migrated existing pages written in plain HTML, CSS and JavaScript to a reusable component architecture.
- Implemented client-requested changes and fixes while keeping visual consistency and code quality.

PHP Developer — Eximo Software Sep 2022 – Dec 2022

- Developed forms, views and features in PHP connected to SQL databases, covering both business logic and persistence.
- Worked on existing administrative flows, adding validations and adjustments requested by the team.
- Handled maintenance and incident resolution on modules already running in production.

TECHNOLOGIES

Backend: PHP, Laravel, Node.js, Python, FastAPI, REST APIs
Databases: MySQL, SQLite, SQLAlchemy, SQL
Tools: Git, GitHub, Docker, Linux, Postman
Frontend: JavaScript, TypeScript, React, Astro, Tailwind CSS, HTML5, CSS3

EDUCATION

University Technical Degree in Web Development
Universidad Nacional del Comahue · 2020 – 2023

LANGUAGES

Spanish: native
English: upper-intermediate (fluent technical reading, professional written communication)
